

Exercise 1

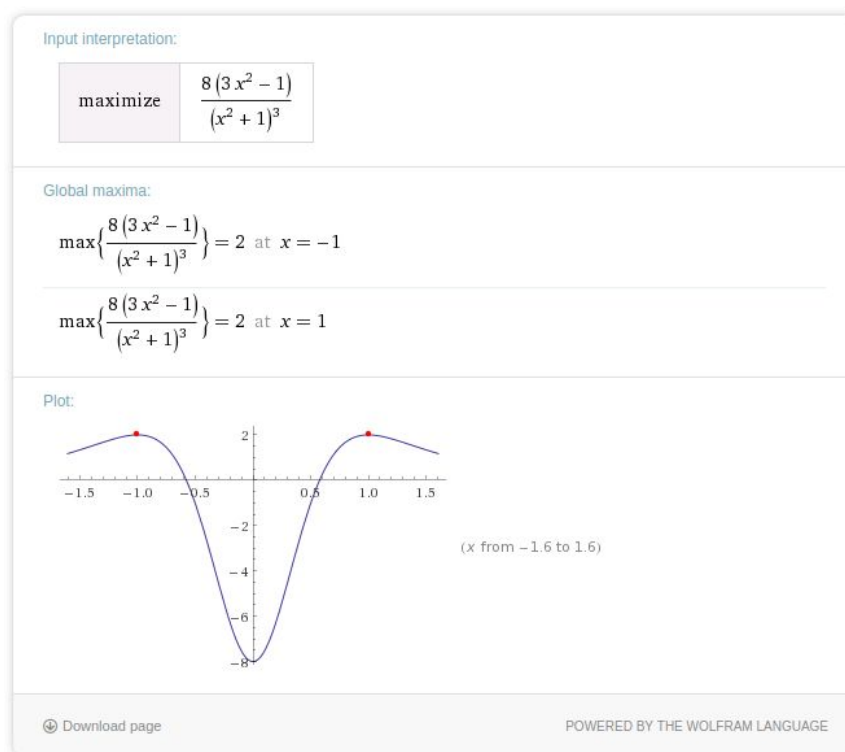

1) Find a upper bound

Second derivative of $f(x)$ is

$$\frac{8(3x^2 - 1)}{(x^2 + 1)^3}$$

The maximum value of $\frac{8(3x^2 - 1)}{(x^2 + 1)^3}$ is 2 at $x=-1$ and the minimum is -8

The highest value is 8 because we take module from function

The error made is then $\leq 2/3n^2$

2) Please see attached file Exercise1_2.c

It can be compiled using command

`gcc Exercise1_2.c -o Exercise1_2`

Run command

```
./Exercise1_2
```

n

where n is the number of intervals.

```
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$  
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$  
gcc Exercise1_2.c -o Exercise1_2  
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$  
./Exercise1_2  
Enter the number of intervals: 100  
Calculated pi 3.1416009869231254  
The approximation of error is 0.0000666666666667  
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
```

3)

Partitioning - process will calculate it own bunch of intervals based on its id of process.

Communications – process 0 will send number of intervals to other processes. Then, calculated values will be summed and final result will be obtained by process 0.

Mapping – algorithm is highly parallelized that is why it not necessary to worry about issues during communication.

Agglomeration – uses at the end of calculation when need to summarize all results from processes. Process with id 0 hold the summarize result.

Please see attached file Exercise1_3.c

It can be compiled using command

```
mpicc Exercise1_3.c -o Exercise1_3
```

Run command

```
mpirun -n kolProcess ./Exercise1_3
```

n

where n is the number of intervals and kolProcess number of processes

```
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$  
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$  
mpicc Exercise1_3.c -o Exercise1_3  
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$  
mpirun -n 4 ./Exercise1_3  
[Node 0] Enter the number of intervals: 100  
[Node 0] Calculated pi 3.1416009869231249  
The approximation of error is 0.0000666666666667  
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
```

4) Please see attached file Exercise1_4.c

It can be compiled using next command

```
mpicc Exercise1_4.c -o Exercise1_4
```

Run command

```
mpirun -n kolProcess ./Exercise1_4
```

n

where n is the number of intervals and kolProcess number of processes

```
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
mpicc Exercise1_4.c -o Exercise1_4
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
mpirun -n 4 ./Exercise1_4
[Node 0] Enter the number of intervals: 100
[Node 0] done!
Found max process time 0.000001
Found avr process time 0.000000
Found min process time 0.000000
[Node 0] Calculated pi 3.1416009869231249
The approximation of error is 0.0000666666666667
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
mpirun -n 4 ./Exercise1_4
[Node 0] Enter the number of intervals: 1000
[Node 0] done!
Found max process time 0.000009
Found avr process time 0.000004
Found min process time 0.000002
[Node 0] Calculated pi 3.1415927369231262
The approximation of error is 0.0000066666666667
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
```

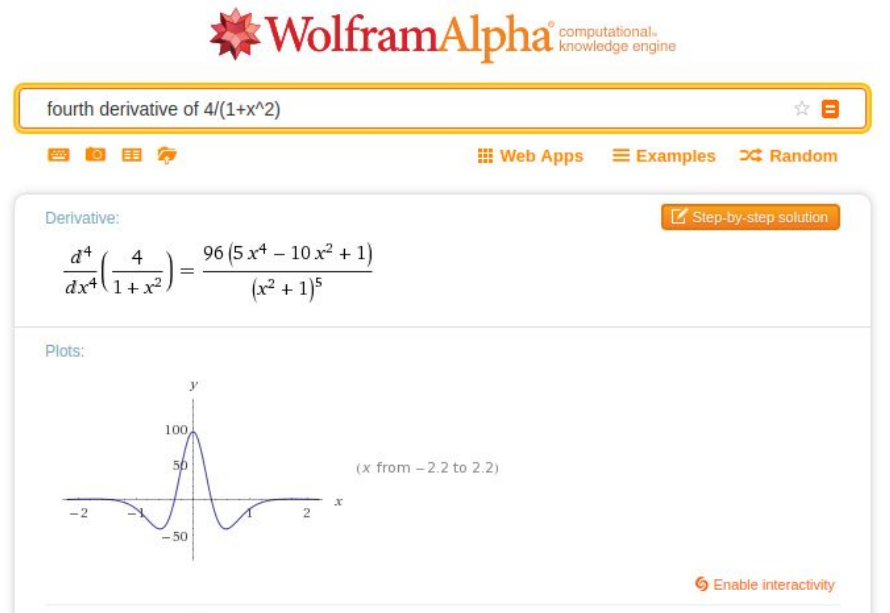

Exercise 2

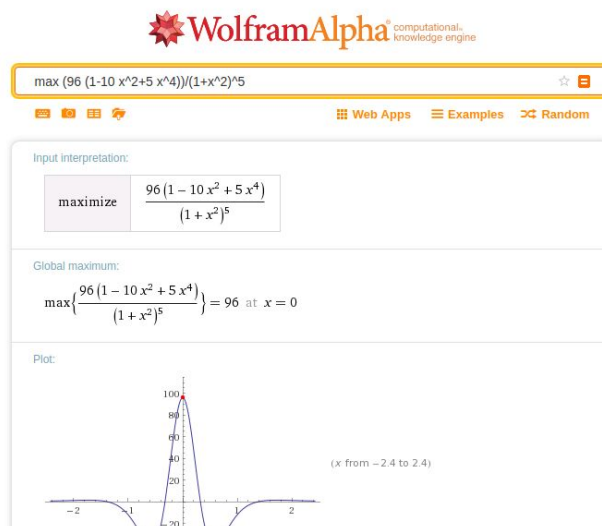

The error made is then $|E_s| \leq \frac{K(b-a)^5}{180n^4} \quad |f^{(4)}(x)| \leq K$

Find an upper bound

Fourth derivative of $f(x)$ is

The maximum value of $\frac{96(1 - 10x^2 + 5x^4)}{(1 + x^2)^5}$ is 96 at $x=0$

The highest value is 96 because we take module from function
The error made is then $\leq 96/(180 \cdot n^4)$

- 1) Please see attached file Exercise2_1.c
It can be compiled using command
`gcc Exercise2_1.c -o Exercise2_1`

Run command

./Exercise2_1

n

where n is the number of intervals.

```
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
gcc Exercise2_1.c -o Exercise2_1
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
./Exercise2_1
Enter the number of intervals: 10
Calculated pi 3.1415926529697860
The approximation of error is 0.0000533333333333
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
```

2) Approach for parallel programming of this algorithm is the same as for previous algorithm

Please see attached file Exercise2_2.c

It can be compiled using command

mpicc Exercise2_2.c -o Exercise2_2

Run command

mpirun -n kolProcess ./Exercise2_2

n

where n is the number of intervals and kolProcess number of processes

```
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
mpicc Exercise2_2,3.c -o Exercise2_2,3
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
mpirun -n 4 Exercise2_2,3
[Node 0] Enter the number of intervals: 10
Calculated pi 3.1415926535896417
The approximation of error is 0.0000533333333333
[Node 0] done!
Found max process time 0.000001
Found avr process time 0.000001
Found min process time 0.000001
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
```

Exercise 3

1) Please see attached file Exercise3_1.c

It can be compiled using command

```
gcc Exercise3_1.c -o Exercise3_1 -lm
```

Run command

```
./Exercise3_1
```

e

where e is the accuracy.

```
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$  
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$  
gcc Exercise3_1.c -o Exercise3_1 -lm  
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$  
./Exercise3_1  
Enter the number of intervals: 0.001  
Calculated pi 3.1458719999999998  
Error of calculated pi is 0.0042793464102067  
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
```

2) Please see attached file Exercise3_2.c

It can be compiled using command

```
gcc Exercise3_2.c -o Exercise3_2 -lm
```

Run command

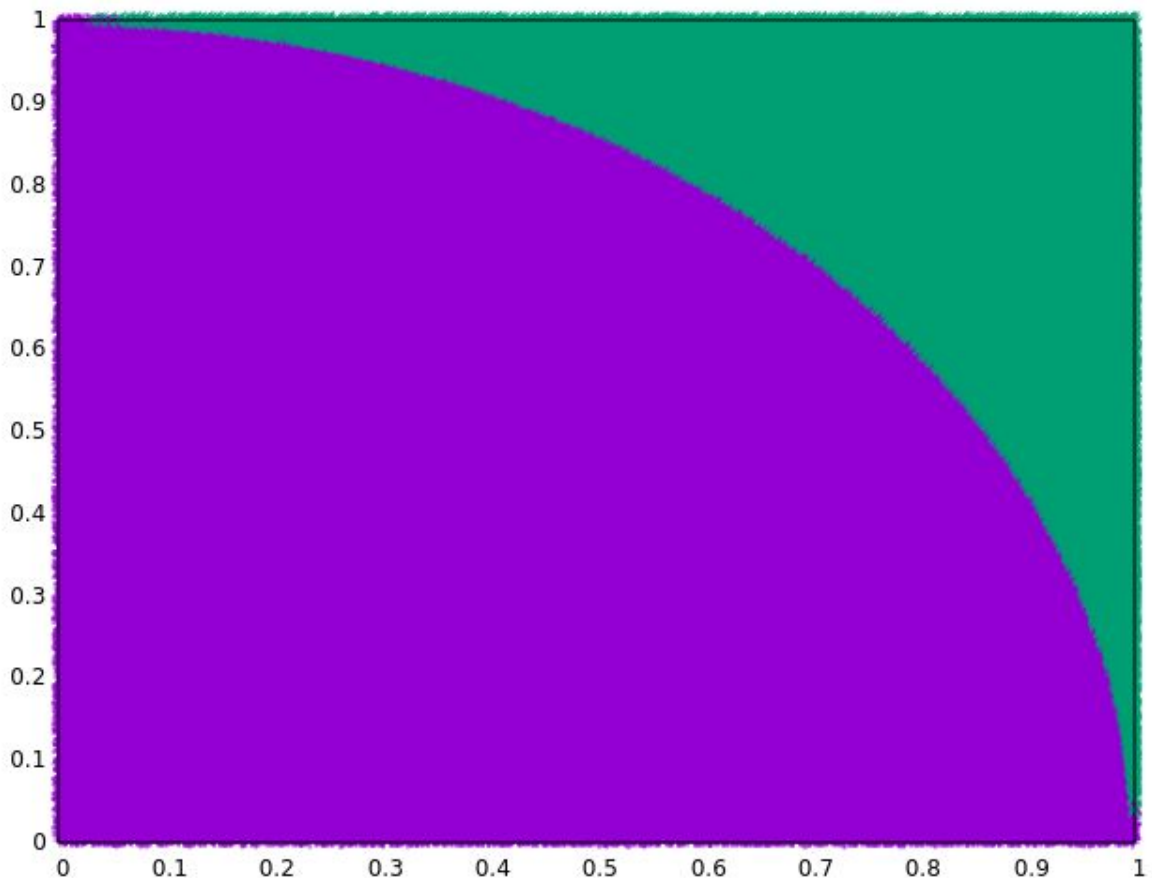

```
./Exercise3_2
```

e

where e is the accuracy.

```
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$  
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$  
gcc Exercise3_2.c -o Exercise3_2 -lm  
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$  
./Exercise3_2  
Enter the accuracy: 0.0001  
Calculated pi 3.1419142400000002  
Error of calculated pi is 0.0003215864102071  
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
```

Plot

3,4) Please see attached file Exercise3_3,4.c

It can be compiled using command

`gcc Exercise3_3,4.c -o Exercise3_3,4 -lm`

Run command

`./Exercise3_3,4`

e

where e is the accuracy.

```
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
mpicc Exercise3_3,4.c -o Exercise3_3,4 -lm
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
mpirun -n 4 Exercise3_3,4
[Node 0] Enter the accuracy: 0.001
Calculated PI = 3.14098203592814373, Error is 0.00061061766164938
set@set:/mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
```

5) Please see attached file Exercise3_5.c

It can be compiled using command

`gcc Exercise3_5.c -o Exercise3_5 -lm`

Run command

`./Exercise3_5`

e

where e is the accuracy.

```
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
mpicc Exercise3_5.c -o Exercise3_5 -lm
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
mpirun -n 4 Exercise3_5
[Node 0] Enter the accuracy: 0.001
[Node 0] Calculated PI = 3.14098203592814373, Error is 0.00061061766164938
set@set: /mnt/C4D630CFD630C388/Studing/5-1_Lux/Parallel and Grid Computing/lab2$
```
